CONGRATULATIONS

You're now the proud owner of a gaming mouse that can perform all those core functions at the touch of a button – all without needing to install drivers. It doesn't matter whether you're a right or left-hander, this mouse gives you total freedom. Once plugged in, every function is available for use – regardless of whether you use a Mac® or Windows® PC.

Hardware-based configuration mode

No long-winded driver configuration means no stress. The ROCCAT™ Kova can be adjusted to suit your needs at the press of a button – and all completely driverlessly.
The 5(+2) mouse buttons are preconfigured with the most important functions for any software application or game.

ROCCAT™ Griptech side areas

Despite its compactness, the ROCCAT™ Kova features special Griptech side areas for left and right-handers alike. These stabilize mouse handling and boost grip in particularly heated gaming situations. Along with the Griptech side areas, the mousewheel also features a non-slip coating.

Customizable light system

Here too you can change colors or the light effect in a second. Get your ROCCAT™ Kova to light up in a variety of legendary colors.
The discreetly integrated LEDs on the sides of the mouse cast an atmospheric aura over the desktop, particularly when you activate the 'breathing' function.
